

Illuminating in Style

An icon of modernity, the Ledino Generation III boasts one wafer thin disc with six LEDs that freely float in stark, stylish blocks. This light emitting source features state-of-the-art, anti-glare LEDs that create a cosmic quality of light that appears to come out of thin air.

Super energy efficient, LEDs use nearly 80% less energy than regular light bulbs. Using less energy, and therefore lowering electricity costs, Philips Ledinos have a lifetime of 20,000 hours, making them a longer lasting, more durable and cost-effective choice. They also emit less heat, are cool to the touch, and therefore they are also a safer option. LEDs are environmentally friendly.
